

DIVA: The Future-Ready Archive Backbone

High-Performance.
Trusted. Cost-Effective.

DIVA

What is DIVA?

DIVA is a high-performance archive management platform designed to securely manage media across on-premise, cloud, and hybrid environments. It serves as a reliable backbone for modern media operations, ensuring data integrity and predictable performance for archives of any size.

Why Choose DIVA?

- **Massive Scalability:** Built to handle the largest multi-petabyte archives.
- **Storage Flexibility:** Supports On-prem and cloud storage to avoid vendor lock-in.
- **Media-Aware Intelligence:** Features smart search, previews, and partial restores to move only the data you need.
- **Cost-Optimization:** Intelligently tiers media to reduce storage and egress expenses.
- **Major Price Reduction:** New pricing cuts costs by over 50%, making DIVA accessible for mid-market and smaller media teams.

DIVA: The Future-Ready Archive Backbone

Who DIVA Benefits:

News Organizations

Continuous ingest and quick retrieval for breaking news

Sports Broadcasters

Rapid highlight reuse and long-term historical archives

Studios (M&E)

Managing petabyte-scale catalogs in hybrid environments

Corporate Enterprise

Compliance-driven retention and cost-optimized scaling

Latest Innovations

Unified Search Experience

A single, modern interface for faster, smarter content discovery.

Enhanced Migration Utility

Automated, zero-disruption transitions from third-party and legacy archive platforms.

MsQuic UDP Acceleration

Secure, high-speed data transfers for moving content across sites.

Advanced Analytics

Interactive trend charts to track archive growth and system performance.

All-in-One Installer

Simplifies setup and ensures consistency across environments.

2026 Roadmap Highlights:

LTO-10 Support

Next-gen capacity (up to 30 TB native) and throughput (400 MB/s).

Object Storage Lifecycle Management

Automated tiering across AWS, Oracle, Google, and Azure.

Safe Deletion & Recovery

Flexibility to delete items with the safety net of full recovery.

Accelerated Tape Migration

Parallel processing to speed up transitions between tape generations.
