

Telestream & Adobe

One Seamless Media Workflow

From Timeline to Review – One Seamless Workflow

Premiere Pro + Telestream Vantage + Adobe Media Encoder + Frame.io V4

FULLY ORCHESTRATED BY VANTAGE — NO MANUAL HANDOFFS

- Editor stays in Premiere Pro — no context switching
- Governed presets ensure consistent output
- Stakeholders review on Frame.io within minutes

Adobe Panel Submission with AME Rendering

One Panel Action Replaces a Multi-Step Manual Process

CHALLENGE

Getting a finished sequence from Premiere Pro into a governed delivery pipeline typically requires multiple manual steps — exporting, monitoring renders, and handing off files. Teams need a faster, more connected path.

KEY BENEFITS

One-Action Submission

Submit from the panel while Vantage picks up the output automatically — a streamlined path from timeline to delivery.

Flexible AME Rendering Options

Render locally on the editor's own system or offload to the Vantage-controlled AME system — both paths deliver full creative fidelity with governed presets.

Metadata Continuity

Naming conventions, workflow metadata, and delivery logic are applied consistently at submission time — ensuring traceable, compliant outputs every time.

Faster Turnaround

Submission and rendering happen while the editor continues working in Premiere Pro — no waiting.

WHY IT'S BETTER

Closes the Last Manual Gap

Combined with AME Backend and the redesigned panel, this completes a full end-to-end Adobe submission story — zero manual file handoffs.

Preserves Creative Fidelity

Whether rendering locally or via Vantage-controlled AME, the editor's LUTs, effects, and export presets are fully honored.

Governed Submission

The Vantage panel adds workflow-level guardrails — required metadata fields, destination selection, and routing logic — on top of AME's powerful rendering engine.

Cohesive Adobe Ecosystem

Alongside Frame.io V4 and AME Backend, this positions Vantage as the operational backbone for Adobe-centric media organizations.

Telestream Vantage Backend Integration with AME

AME's Creative Fidelity, Wrapped in Vantage's Operational Backbone

CHALLENGE

Enterprise media teams need a way to connect AME's powerful rendering capabilities to facility-wide automation, monitoring, and delivery pipelines — extending its value from the desktop to the entire organization.

KEY BENEFITS

Editors Focus on Creative

Once submitted, AME renders in the background while editors move on to their next project — Vantage handles everything downstream.

Consistent, Governed Output

Encoding presets, naming conventions, and delivery logic enforced by Vantage across the entire facility.

Centralized Visibility

Single pane of glass in Vantage to monitor all AME render jobs across the facility — giving operations teams complete oversight.

End-to-End Metadata

Sequence metadata and editor-supplied context flows through the entire workflow to the final deliverable.

WHY IT'S BETTER

Native Editor Experience

Panel-based submission inside Premiere Pro drives adoption naturally — editors stay in their creative environment.

Extends AME's Power

Adds enterprise job control, monitoring, and downstream automation around AME's trusted rendering engine — amplifying its reach across the organization.

Scales Beyond the Desktop

Vantage orchestrates AME rendering across multiple machines and connects output to distribution, QC, archive, or MAM workflows.

Completes the Adobe Workflow

Connects Premiere Pro and AME directly to enterprise delivery infrastructure — a seamless creative-to-distribution pipeline.

Frame.io V4 Connector

Seamless V4 Readiness so Customers Move Forward with Confidence

CHALLENGE

Frame.io V4 introduces a powerful new API architecture. Customers using Vantage with Frame.io need their automation workflows to transition smoothly — the updated connector ensures continuity while unlocking V4's full potential.

KEY BENEFITS

Zero-Disruption Migration

Customers move to Frame.io V4 without rewriting any Vantage workflows — the connector supports both API versions seamlessly.

Protected Automation Investment

Every delivery rule, approval trigger, and metadata mapping built against the legacy connector is preserved.

Access to New V4 Capabilities

The updated connector is built on the V4 API, positioning customers to take advantage of new Frame.io platform capabilities as they become available.

Reduced Migration Risk

Decouple platform update timeline from workflow integration — migrate at your own pace with full confidence.

WHY IT'S BETTER

Dual-Version Support

Vantage supports both V4 and legacy Frame.io APIs simultaneously — customers migrate at their own pace with full workflow continuity.

Native Connector Depth

Purpose-built for Frame.io — tight workflow orchestration, metadata continuity, and operational monitoring that a native connector uniquely delivers.

Ready for V4 Day One

Connector is built and validated alongside V4's enterprise rollout — joint customers get immediate workflow support.

Adobe Ecosystem Foundation

Built on the V4 architecture, the connector is a strategic foundation for deeper Adobe integration as the platform continues to evolve.
